

**Differences between Fire-i board (classic) and new dual port (on board) model**

The two models share the same main specifications regarding resolution, frame rate, CCD mechanical dimensions etc. The following table summarizes the differences:

<b>Characteristics</b>	<b>Fire-i board (classic)</b>	<b>Fire-i board dual</b>
Number of Firewire ports	2 (one detachable)	2 (on board)
C-mount adapter support	Yes	No
M12 x 0.5 lens support	Yes	Yes
Strobe support	Yes	Yes*
Unibrain plastic housing compatibility	Yes	No

(\*) The Fire-i board dual incorporates basic hardware modifications that make easier the use of basic strobe functionality as offered by the Texas Instruments TSB15LV01 chipset. The classic Fire-i board camera lacks those modifications but nevertheless it is still possible to utilize the strobe functionality.
